TEXTILES

Paper Past Times

5 x 6 ft Paper

The textile piece is a combination of film pictures I took during my travels. I combined three images and overlaid and edited them in Adobe Photoshop. Then, I printed the image, and weaved it with an abstract acrylic painting I painted previously. It is meant to spark thoughts on memory and how experiences blend together to become nostalgia.

Loose Ends

3 x 4 ft Yarn

I explored freeform crochet through this piece, using only second hand yarn to craft the portrait of a "pieced-together" woman. I worked from the eyes outwards, and left the back of the piece unwoven on purpose. The messy back aims to represent how one can appear to be put together, but in actuality; unraveling.

UI/UX

Flavored Salt Juicer

The "Salt & Squeeze", sustainable juicer aims to eliminate juicing scraps through a dehydration process. After the scraps are dry, the machine grinds the pieces with sea salt in a spice grinder mechanism. The salt and juice can then be used by chefs, and mixologists alike.

Shelter Device

The multi-functional product can be distributed to unhoused individuals or travelers to provide comfortable and practical shelter on the go. The device works 8 different ways through folding methods, and can attach to any wall, tree, or pole. Additionally, the materials the product is composed of are all cost effective, and long-lasting.

Self-Sorting Trash Can

After working at a UCLA restaurant and taking out the trash, I realized many people do not sort their trash correctly. This design sorts trash based on size, rather than material; making it easier for the user. One would simply throw the trash in the compartment that is best fit in, and the device would sort it using weight and PH in order to categorize it correctly.

Notch

Many college students shotgun drinks. I created a tool to make shotgunning more safe, efficient, and accessible to everyone. The prototypes were 3D-printed, but ideally in the future they will be produced in steel.

SCULPTURES

Manta Ray

7.5 ft x 8ft Reed, potato starch, paper and wire

After going on a night dive in Hawaii and having manta rays float mere inches away from me, I was inspired to replicate the same phenomenon - only on land. The base of the ray is galvanized steel wire and wrapped soaked reed. Afterwards, an LED light system was placed inside before enclosing the creature. Potato starch and natural fibrous paper were used, layering paper and "glue" to create a sheer shell.

Boule Bowl

12 x 9 in Wood

Making bread is difficult. I created this boule using wood in order to measure the "rising process" of fermentation in bread making. I laser cut the pieces and carved the lid. The fabric pieces fall as the bread rises.

BLOOM

3 x 2 ft Reed, potato starch, paper and wire

I was inspired by flowers that I see when I go on walks. I wanted the sculpture to feel surreal and whimsical, which is why I chose a larger scale. The lamp reflects a pattern onto the floor, made possible by the carved interior cardboard panel.

Building Blocks - Child Light

9 x 3 x 2 in 3-D Printed and Cardstock

Many parents choose to display their childrens art on the fridge or on the wall. The blocks combine interior design and play. One can create whatever sculpture, and then place it on the 3-D printed base, and it becomes a light fixture.

Indonesia

20 x 30 in Cardboard and glue

Inspired by the geometric design of waterhouses, especially in Indonesian, I designed a house of my own. After I sketched out the floorplan, I used recycled boxes and hot glue to make my drawing come to life.

FINE ART

MuralCare

I founded the organization. I teach new officers my original paint-by-number mural approach and lead all 47 volunteers at our painting events. Mural Care completed one 52 by 6 foot mural, and is planning another mural that will begin in January. I received over 26 gallons of reused paint from sustainability oriented companies. A few commercial stores, including Home Depot and Ace Hardware, donated over 300 dollars worth of supplies.

Venus

16 x 20 in Acrylic on cardboard and canvas

I was inspired by tropical greenery and unique plants like the venus flytrap. The abstract strokes of color in curved motions makes the motion continuous. Aimed to explore dimension and contrast overtop.

Aurelio

18 x 20 in charcoal

The piece is a portrayal of my 90-year-old grandfather who died earlier this year. I focused on capturing the wrinkles, and scars on the surface of both his face, and hands - reminders of his hardships in the Vietnam War, and time as in the Philippines.

Gears

16 x 20 in pencil

I observed the intricacy of bike gear before using a mixture of graphite sticks and pencils to draw them in detail. I practiced smooth shading in contrast with hard lines, whilst trying to capture how light reflects off the metal of the machinery.

Sketchbook

7 x 4 in Pen and Colored pencil

A catalog of the sketches I drew while travelling through South East Asia.

GRAPHIC DESIGN

Matchbook Matcha

At UCLA, I started a pop-up matcha business. I designed the brand and logo system.

Monkey Comic

A fun comic depicting monkeys hiking up the famous Mt. Tam in San Fransico for pancakes.

Website Security

A creative CAPTCHA idea, where you must color in the image in order for the website to allow the user in.

Abstract Ideation

I was exploring color, form, and shape on Adobe Illustrator.

UCLA Map

A colorful map to direct new students around campus and help them find water and food sources.
